

Enterprise pricing sheet

For agencies and groups tracking more than 50 businesses · Effective 17 September 2026 ·
Prices in USD, billed monthly

Anserra is an AI-visibility platform for local service businesses and their agencies. It checks whether AI assistants (ChatGPT, Perplexity, Google AI) mention a business — and whether an AI agent can actually choose and book it — then delivers a prioritized fix plan.

How Enterprise is priced

Enterprise starts from the Multi-50 plan (**\$2,290 per month for the first 50 businesses**) and adds a per-business price for every business above 50. Volume tiers apply automatically to the businesses that fall within each range.

Businesses	Price	Example monthly total
1–50	Multi-50: \$2,290 flat	50 businesses: \$2,290
51–100	\$39 per business per month	100 businesses: \$4,240
101–250	\$34 per business per month	250 businesses: \$9,340
251 and above	\$29 per business per month	300 businesses: \$10,790

Worked example, 120 businesses: $\$2,290 + 50 \times \$39 + 20 \times \$34 = \textbf{\$4,920 per month}$.

What every Enterprise subscription includes

- Everything in Multi-50: weekly monitoring of 25 prompts per business across ChatGPT, Perplexity and Google AI Overviews, 3 samples per prompt, confidence intervals
- Weekly Agent Readiness run (real browser agent, five customer tasks, screenshots) for every business
- Bulk scanning with uploads up to your business count; saved client lists; weekly re-runs
- White-label PDF reports and client result links under your brand; multi-user access
- Source analysis, prioritized fix plan, generated llms.txt, robots.txt, JSON-LD and agent-service.json
- REST API and MCP server; priority in the scan queue

- Custom prompt limits per business and custom data retention
- Invoice billing, monthly; priority support by email

Optional add-ons

Add-on	Price	Notes
Claude (Anthropic) as a tracked engine	\$19 per business per month	Same prompts and samples as the base engines
Gemini (Google) as a tracked engine	\$19 per business per month	Same prompts and samples as the base engines
